TITLE: On the "Momentum Coefficient" in the Influence Zone of a Localized Hydraulic Resistance (O "koeffitsiyente kolichestva dvizheniya" v zone vliyaniya mestnogo gidravlicheskogo sopro-tivleniya)

PERIODICAL: Tr. In-ta energ. AN GruzSSR, 1957. Vol 11, pp 137-140

ABSTRACT: Allowing for the nonuniformity of the velocity distribution in the effective cross section of a flow shows that the localized loss caused by an abrupt divergence equals approximately half the value obtained with the Borda formula. The author conducted measurements of a_0 in a pipe section having a cross-sectional area ω ($d = 100$ mm) downstream of the partition and an orifice area f ; this made it possible to plot the curve of the variation of a_0 along the length of the pipe. The experiments revealed that immediately downstream of the partition, when $f/\omega = 0.1$, $a_0 = 24.5$, and, when $f/\omega = 0.2$, $a_0 = 12$. At a distance $(5 - 6)d$ from the partition a_0 drops back to its initial value. The experiments confirmed the validity of the

TITLE: A problem in linear programming with variable technological coefficients

SOURCE: AN AzerbSSR. Vychislitel'nyy tsentr. Trudy, v. 3. Baku, 1965, 110-124

TOPIC TAGS: linear programming, optimization, mathematic analysis

ABSTRACT: This article examines a problem (problem A) in linear programming where the coefficients of the technological matrix may be continuously varied within definite limits. The problem may be stated as follows: it is required to determine a plan $x = (x_1, x_2, \dots, x_j, \dots, x_n)$ maximizing (minimizing) the optimality function $L = c_1x_1 + c_2x_2 + \dots + c_jx_j + \dots + c_nx_n$ under the conditions $x_1A_1 + x_2A_2 + \dots + x_jA_j + \dots + x_nA_n = B$...,

$$\begin{array}{c} x_i \geq 0 \\ a_{ij} \leq a_{ij} \leq \bar{a}_{ij} \end{array}$$

$$i = 1, 2, \dots, m; j = 2, \dots, n$$

Here $A_j = (a_{1j}, a_{2j}, \dots, a_{ij}, \dots, a_{nj})$ is the j^{th} column vector of technological
Card 1/2

ACC NR: AT6027267

matrix A characterizing the j^{th} method of production; $B = (b_1, b_2, \dots, b_i, \dots, b_m)$

is the column vector characterizing the general dimensions of the production factors;
 a_{ij} is the output coefficient of the i^{th} factor in the j^{th} manner; \bar{a}_{ij} and \underline{a}_{ij} are,

respectively, the upper and lower limits of change in coefficient a_{ij} and may be

either positive or negative. This statement and solution of the problem are new, but there are many different fields in which optimization problems will have the form of problem A. The author assumes that the proposed method will broaden the way for the introduction of mathematical methods into the solution of economic planning and engineering problems in various fields of the national economy, particularly of problems in the oil-refining and chemical industries, where many technological installations have variable coefficients of production output. It is to be noted that the presence of even one such installation impedes the use of general methods of linear programming. Six examples of the application of the problem and its solution are presented. The author considers it his pleasant duty to thank Dzh. Babayev for valuable comments and suggestions. Orig. art. has: 13 formulas, 11 tables, and 3 figures.

TITLE:	A <u>linear programming</u> problem with variable technological coefficients		
SOURCE:	Ref. zh. Matematika, Abs. 1V265		
TOPIC TAGS:	linear programming, optimization		
TRANSLATION: The problem studied is one of linear programming in which the coefficients of the technology matrix may change within defined limits ($a_{ij}' \leq a_{ij} \leq a_{ij}''$), where $\sum_{i=1}^m a_{ij} = Q_j = \text{const}$. Unfortunately, a precise statement of the problem is missing (the problem studied on page 110 is, strictly speaking, senseless, since the fact that the optimal solution of the linear programming problem may change when the coefficients a_{ij} change is not considered), and this does not allow one to estimate the subsequent considerations made by the author which are connected with the study of the altitudes of the polyhedron ($a_{ij}' \leq a_{ij} \leq a_{ij}''$, $i=1, \dots, m, j=1, \dots, n$) in the space of the coefficients a_{ij} . Title : Effect of so-called emotional excitation of an animal on the functional state of the thyroid gland

Periodical : Dok. AN SSSR 99/2, 325-328, Nov 11, 1954

Abstract : The effect of the so-called emotional excitation on the function of the thyroid gland was investigated on 40 dogs and cats by means of the isotope indicator method. The radioactivity of the thyroid gland was measured by means of a gamma-ray counter tube (AMM-4) placed in a thin-walled aluminum cylinder. Results indicate that emotional excitation lessens the ability of the thyroid gland to receive the iodine from the surrounding medium and to synthesize its organic compounds. The effect of emotional excitation on the release of the thyroid gland hormone into the blood is explained.

Title : The Paths of Transmission of Cortical Influences to the Thyroid Gland

Orig Pub : Byul. Ekspер. Biol. i Med., 1957, Vol. 44, № 10, 33-38

Abstract : In normal dogs with the performance of positive conditioned reflexes of the defensive type, the content of I¹³¹ in the thyroid gland (TG) was reduced, as it was also following the action of the unconditioned electric skin stimulus; under the influence of differentiative stimuli the concentration of I¹³¹ in TG increased. Such reactions were seen also in hypophysectomized and in adrenalectomized animals; if both pituitary and adrenals were removed, the reaction

AMIRDZHANOV, K.A.

Treatment of toxic forms of diphtheria. Azerb. med. zhur. no.4:
120-125 Ap '60. (MIRA 14:5)
(DIPHTHERIA)

AMIRAGGVA, M.G.

Role of adrenaline in the transmission of reflex influences to the thyroid gland. Biul. eksp. biol. i med. 49 no.1:21-25 Je '60.
(MIRA 13:7)

1. Iz laboratorii obshchey fiziologii (zav. - prof. V.N.Chernigovskiy)
Instituta normal'noy i patologicheskoy fiziologii (dir. - deystvitel'nyy
chlen AMN SSSR V.N. Chernigovskiy) AMN SSSR, Moskva. Predstavlena
deystv. chlenom AMN SSSR V.N. Chernigovskim.
(ADRENALINE) (THYROID GLAND) (REFLEXES)

AMIRAGOVA, M.G.

Significance of the efferent nerves of the thyroid gland for its function. Biul. eksp. biol. i med. 50 no.10:3-7 O '60.

(MIRA 14:5)

1. Iz laboratorii obshchey fiziologii (zav. .. deystvitel'nyy chlen AMN SSSR V.N.Chernigovskiy) Instituta normal'noy i patologicheskoy fiziologii (dir. .. deystvitel'nyy chlen AMN SSSR V.N.Chernigovskiy) AMN SSSR, Moskva. Predstavlena deystvitel'nym chlen AMN SSSR V.N. Chernigovskim.

(THYROID GLAND--INNERVATION)
(CONDITIONED RESPONSE)

AMIRAGOVA, M.G.

Analysis of mechanisms of transfer of cortical effects to the thyroid gland. Fizul. eksp. biol. i med. 50 no. 11:13-18 N '60.
(MIRA 13:12)

l-ia laboratorii obshchey fiziologii (zav. -- deyствител'nyy chlen AMN SSSR V.N. Chernigovskiy) Instituta normal'noy i patologicheskoy fiziologii (dir. - deyствител'nyy chlen AMN SSSR V.N. Chernigovskiy) AMN SSSR, Moskva.

(THYROID GLAND) (CEREBRAL CORTEX)

AMIRAGOVA, M.G.

Secretory cycle of the thyroid gland in experimental neurosis.
Biul.eksp.biol.i med. 53 no.6:15-19 Je '62. (MIRA 15:10)

1. Iz Instituta normal'noy i patologicheskoy fiziologii (dir. -
deystvitel'nyy chlen AMN SSSR V.V.Parin) AMN SSSR, Moskva,
Predstavelsa akademikom V.N.Chernigovskim.
(THYROID GLAND) (NEURSES)

Primary radiobiological processes (Pervichnyye radiobiologicheskiye protsessy)
Moscow, Atomizdat, 1964. 286 p. illus., biblio. 2700 copies printed. Editor:
V. A. Podoshvina; Technical editor: Ye. I. Mazel'; Proofreader: M. I. El'mus

TOPIC TAGS: amino acid, ionizing radiation biologic effect, nucleic acid, porphyrin compound, radiation biochemical effect, radiation cell effect, radiation tissue effect

PURPOSE AND COVERAGE: This monograph was intended for specialists in the fields of radiology and radiation chemistry, as well as for chemists and physicists interested in the effect of ionizing radiation on living organisms. In this monograph, the transformation of the energy of ionizing radiation in biologic media and the effect of radiation on three classes of biologically important compounds: (1) nucleic and low-molecular material entering into their composition; (2) porphyrins and other materials playing an important role in tissue respiration; and (3) amino acids and albumins are analyzed; also analyzed is the role of these processes in the injurious effect of radiation. The authors express their gratitude to N. V. Timofeev-Resovskiy for his invaluable advice.

Knizhnaya letopis', No 39, 1956. Moscow.

4E4A
Kiev, S.S.R. 19, No. 73(1937) (Russia). — The thermal cond. of the solid vapor of EtOAc is higher than that of acet. The thermal cond. of EtOAc increases in the vapor phase with increasing temp. and decreases in the liquid phase. On the basis of expt. data, coeff. B and ρ in the liquid and vapor phases were calculated according to the Prudovitejov equation $K = A_1 + B \rho + C \rho^2$ (A. 42 5738; 44, 7108g). The values showed that the value of B for EtOAc does not change with temp., it is 0.02×10^{-3} for liquid and vapor phases, the ρ for liquid is 343 and for vapor 1.323 which is close to the literature values.

Title : Effects of Chronic Exposure to Benzene on the Gastrointestinal Tract.

Orig Pub : Sb. tr. Azerb. med. in-ta, 1955, No 1, 219

Abstract : 30 women and 23 men, who worked with benzene over a period of about 5- 20 years and longer, were examined. In addition to the usual neurasthenic symptoms, chronic gastritis was found in 40 persons, gastric and duodenal ulcers in 3, and chronic colitis in 5. By anamnesis most workers showed signs of dyspeptic disturbances.

AUTHOR: Amirbekov, N. M.

TITLE: Change in viscosity of oils of different composition in relation to temperature and pressure

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy. Neft' i gaz, no. 1, 1963, 55 - 60

TEXT: The test material was a distillate with specific gravity 0.9095, molecular weight 352, carbon content in cyclic structures 33.5%, in aromatic 12.5%, in naphthenic 41.0% and in paraffin chains 46.5%, average number of aromatic rings 0.55 and of naphthenic rings 2.40. From this a raffinate with 78% paraffin hydrocarbons and an extract with 82% aromatics were obtained by furfural extraction. These three products and also a commercial machine oil and a residual cylinder oil, all of them from the same crude, were tested. The viscosity was measured by the falling ball method in a special high-pressure viscometer at temperatures 20 to 60°C and pressures up to 2000 kg/cm². It was established that at the above temperatures the viscosity coefficient increased with rising pressure according to the ex-

ACCESSION NR: AP4030815

AUTHOR: Amirkov, N. M.

TITLE: Oil viscosity coefficient versus pressure and temperature

SOURCE: Ivuz. Neft/ i gaz, no. 3, 1964, 69-73

TOPIC TAGS: oil viscosity coefficient, oil viscosity vs pressure, oil viscosity vs temperature, calculation, Barus empirical formula, empirical formula

ABSTRACT: This analytical work was prompted by the fact that there is no satisfactory empirical formula for the calculation of the oil viscosity coefficient depending on different temperatures and pressures. Starting with Barus empirical formula $\eta_p = \eta_T \cdot e^{bp}$, where p = pressure, η_T = viscosity coefficient at temperature T and atmospheric pressure, b = viscosity coefficient at pressure p, b = factor indicating the influence of each kg of pressure on the viscosity change, $1/k_0$, the author introduces new values and corrections (empirical) and derives a new formula for calculating 1) the dependence of viscosity on temperature and 2) a general relation for the determination of viscosity vs changing temperature and pressure. These formulas are, respectively, (1) $b = a/(T - T_3) + b$; T = absolute

TITLE: An Experiment in Drilling a Deep Well With an Eight-inch Electric Drill (Opyt burenija glubokoy skvazhiny 8" elektroburom)

PERIODICAL: Neftyanoye khozyaystvo, 1958, Nr 3, pp 12-15 (USSR)

ABSTRACT: The article presents experimental data on deep drilling with an eight-inch electric drill at the Karadag oil pool (ploschad' Karadag) in the Azerbaijani SSR. The drilling was carried out by the experimental electric drilling department of the Azerbaijani Ministry of Petroleum in cooperation with the VNIIBT Institute. The well was initially drilled with a ten-inch E-250/10 electric drill of 150 kw. at 530 r.p.m. and drilling was continued with an eight-inch E-215/10 electric drill using ERSh 5 9/16" casing and No. 11 three-cone rock bits. The E-215/10 electric drill, designed by the VNIIBT Institute and produced in 1952 had an outside diameter of 215 mm. and an MAP1-215-658/10 motor of 100 kw. at 530 r.p.m. For purposes of comparison several wells were also drilled with TS3-8" sectional

turbodrills and Tl2M1-8" serial turbodrills using 3B11SU bits. Tables 1-5 give the drilling results which show that the electric drill is most efficient. The E-215/10 electric drill was tested under industrial conditions for the first time and consequently some of the disclosed defects can be eliminated by further design improvement. Nevertheless, the experiment showed that the E-215/10 electric drill is efficient and can increase the rate of deep drilling with weighted drilling fluids, that the three-phase induction current is sufficiently suitable for drilling depths of more than 2,000 m., and that the design of the oil-filled SHEM-215 spindle is quite efficient and will permit a weight increase on No. 11 bits of 18-20 tons. The authors conclude that the VNIIIBT designers must speed up designing of the new E-215/8 electric drills of 150 kw. at 750 r.p.m. which will even further increase the rate of drilling deep wells with weighted drilling fluids. There are 5 tables.

ABSTRACT:

From May to September 1962 eight species of horseflies were collected in the Dengiz district of the Guriev region. The most common species are *Tabanus flavoguttatus*, *T. acuminatus*, *T. erberti*, and *T. paecularis*. They are most common at the end of May. Wasps are the most important natural enemies of these insects.
